## Apprenticeship Role: **Engineering - Electrical Installation**

### **Initial Role Coverage:**

Identifying Materials, measuring, cutting and installing to a drawing  
Working with a team of electricians  
Learning electrical principles  
Health and Safety with Electricity  
Environmental technologies  
Understanding practices and procedures  
Written course work  
Due to the Health and Safety aspects the candidate must gain competency in basic skills, once they are confident the role will be varied and interesting with plenty of scope for expansion for the right candidate.

### **Skills Required:**

A basic knowledge of electrics would be an advantage  
Good maths skills  
Confident in communicating  
Able to focus on set tasks  
Enjoy working with your hands  
Versatile and confident to multi task  
Complete tasks accurately  
Be positive, outgoing and keen to learn new skills

### **Ideal Candidate:**

We are looking for someone who takes a pride in their work. A focused person would be best suited to the role. Keen to learn academically as well as hand on. Unfortunately if you are colour blind this role is not going to be suitable.

### **College Training:**

1 Day a week at College with up to 3 one off week requirements, home revision and course work is also required.

### **Levels:**

Levels 2 & 3

### **Applications:**

Through online application with the supply of a current CV.
